Ventilator Series

ICU-level ventilation for every care setting

Ventoux^m

ICU-level ventilation for every care setting

Built on decades of experience

Designed and manufactured in-house by Flight Medical, the Ventoux™ series is built on the company's 20 years of experience and extensive research and development.

More than 22,000 Flight Medical ventilators are in service across more than 50 countries around the world by primary, critical and long-term care facilities, as well as by emergency service providers.

Vent_{O²}ux[™] **12**"

Large display for Emergency Room and Acute Care

Next-generation ICU-level ventilator

Ventoux™ is Flight Medical's newest ventilator series, delivering ICU quality performance to infant and adult patients. Ventoux's adaptive ventilation modes learn and integrate patient responses in order to effectively adapt to their physiological and clinical conditions.

The highly versatile turbine-powered devices deliver levels of performance that meet ICU needs and cover the entire spectrum of care at an affordable cost.

 $Vent_{O_2}ux^{\mathsf{m}} 8"$

Home care, Long-term care, EMS and Intra-hospital transport

Advanced monitoring, ease of use and cost-effective

The easy-to-read lung-mechanic, SpO₂ & etCO₂ display provides an at-a-glance view of the patients' ventilation status, delivering a reliable basis for therapeutic decisions.

The same user-friendly, intuitive interface is incorporated across all models within the series, allowing for reduced learning time and seamless operation with easy access to nurse controllers.

Versatile ventilator across multiple care settings

The compact and lightweight Ventoux ventilator series offers an ideal solution in a broad range of clinical environments.

- High and low flow oxygen supply
- Invasive and non-invasive ventilation with high leak compensation
- Advanced modes of ventilation
- Optional proximal flow sensor for precise measurements
- Different configurable models
- Three different optional internal capnography modules
- Optional Nellcor SpO₂ module
- Optional single or dual limb patient circuit

Unique cuff pressure controller module

Flight Medical's unique cuff pressure controller is offered as an advanced ventilator module, making the Ventoux ventilator the only portable ventilator to feature this unique technology.

The automatic cuff pressure controller is fully integrated with the system.

It reduces clinical intervention by continuously monitoring and automatically adjusting cuffed tracheal and tracheostomy tube pressure during the entire ventilation period. The automatic cuff pressure controller's unique design helps prevent and control ventilator-associated pneumonia (VAP) and tracheal injuries while supporting and optimizing mechanical ventilation therapy.
