

6.4.14

To whom it may concern:

The Respiratory Department at Sourasky Medical Center has been operating Flight-60 ventilators on a daily basis for over 2 years.

The Flight-60 ventilator has proven time and again to provide a high quality of ventilatory support for all types of patients. More than that, the Flight-60 has shown to be a highly Mobile ventilator enabling safe and easy transport of patients, including the complicated ones.

The Ventilator was accepted for use in our department by the medical team with a very quick learning curve on their part. We have been satisfied with the professional support of Flight Medical Ltd., as well as with their quick response for updating needs that come up along the way.

Not many new devices had been accepted and integrated into our daily work in such an easy, smooth and reliable way, as the Flight-60 had. We In General Department 1 are looking forward with the Respiratory Department in trying the new modes of ventilation and with other new opportunities offered by Flight-Medical's capable team.

Sincerely
